Inland Waste Solutions, LLC Completes Acquisition of Certain Assets From Waste Management

July 31, 2015—Inland Waste Solutions, LLC announced today that it has received all required approvals and has now completed the acquisition of certain assets from Waste Management’s Deffenbaugh Disposal, Inc. subsidiary. Under the terms of this transaction, Inland will acquire certain commercial assets from Deffenbaugh in the Bethel Heights, AR; Fort Smith, AR; and Topeka, KS market areas.

“The acquisition of the Deffenbaugh divestiture assets aligns perfectly with our growth plan and builds tremendous value for Inland,” said Bart A. Begley, Chief Executive Officer of Inland Waste Solutions, LLC. “It also increases our route density and allows for the company to realize synergistic cost savings.”

“This transaction provides Inland with a tremendous expansion of our commercial services in these market areas, and we are very pleased to welcome these dedicated and very capable employees,” said Monty Davison, President of Inland Waste Solutions, LLC. “We look forward to a successful integration and ultimately expanding our service offerings to our new customers.”

Management at Inland has doubled the company’s size in the past 36 months while expanding its operations to offer residential, commercial, and industrial collection services in targeted market areas across seven states.

Funding for this transaction was provided by MUFG Union Bank, N.A., through a senior-secured debt facility. The bank’s Environmental Group, based in Los Angeles, California, managed the transaction.

The acquisition complies with the U.S. Department of Justice requirement that Waste Management and Deffenbaugh divest of certain small container commercial waste service routes in Topeka, KS; Bethel Heights, AR; and Van Buren, AR.
